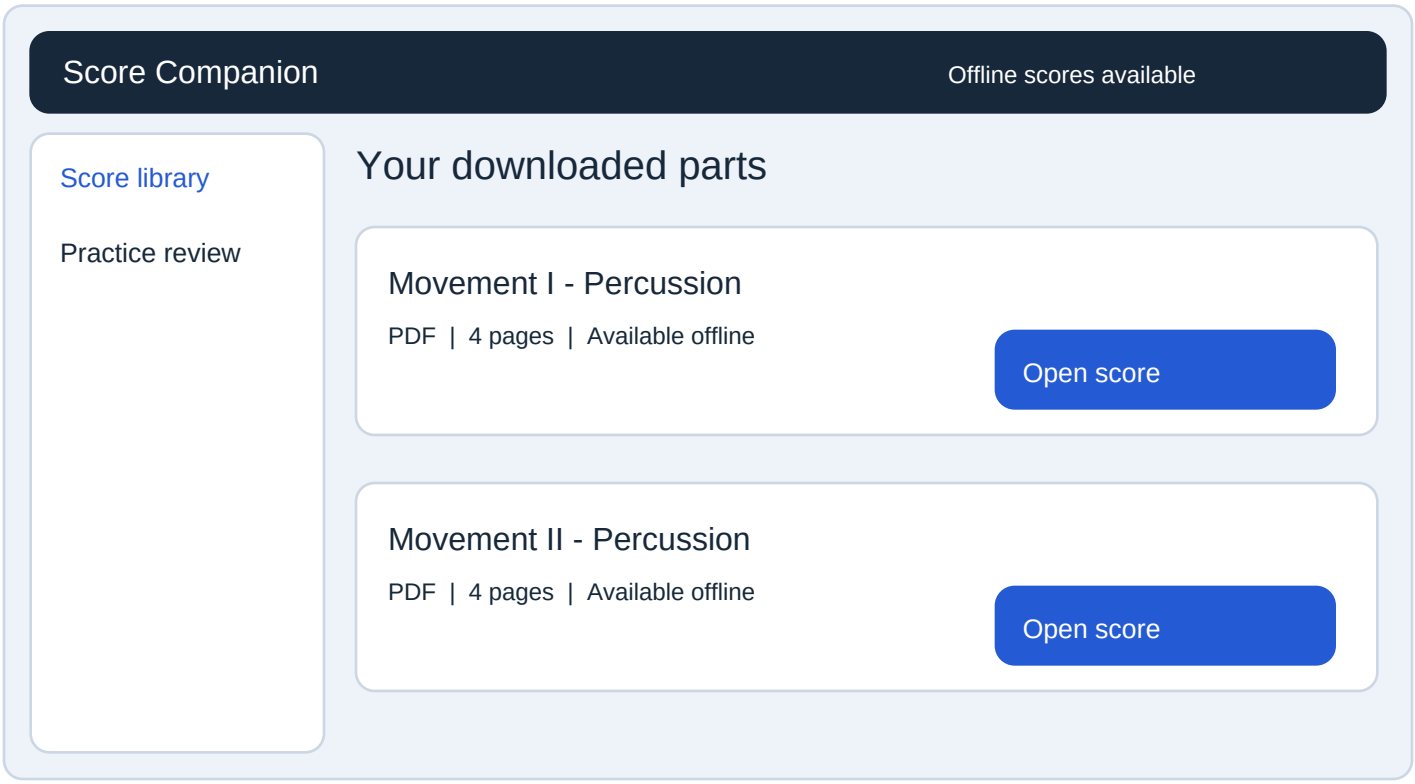
Screen 1: Offline score library

B: personal music library; C: offline library and flow; D: library layout. Integrated/redrawn by A.



What the user sees: Downloaded instrument parts with an offline badge and a clear Open score action.

What the user does: Open Movement I - Percussion from the downloaded library.

Design decision: Combine a predictable personal library with clear offline availability. Avoid browse categories and online discovery.

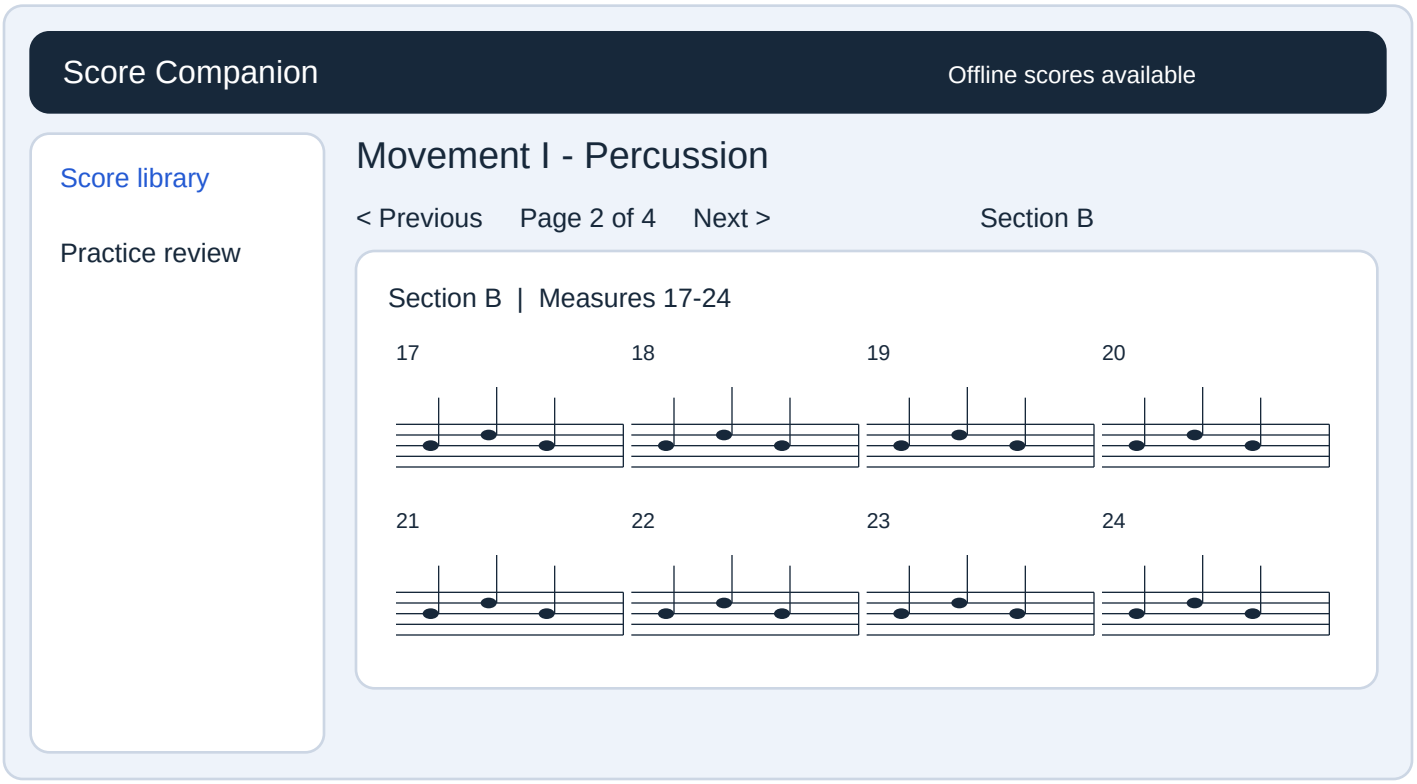
Interview evidence: “I download everything to where it's all in the same place in the offline section so I can easily bounce between.” - Interview 1

Assumption to test: Users download assigned parts before rehearsal.

Next: Score viewer and navigation

Screen 2: Score viewer and navigation

B: notation view; C: navigation outside score; D: page indicator and score viewer. Integrated/redrawn by A.



What the user sees: A readable score with page and section controls outside the notation.

What the user does: Use page or section controls to reach Section B, measure 24.

Design decision: Combine Jonathan's page indicator and Logan's large notation area with Ankit's external navigation controls.

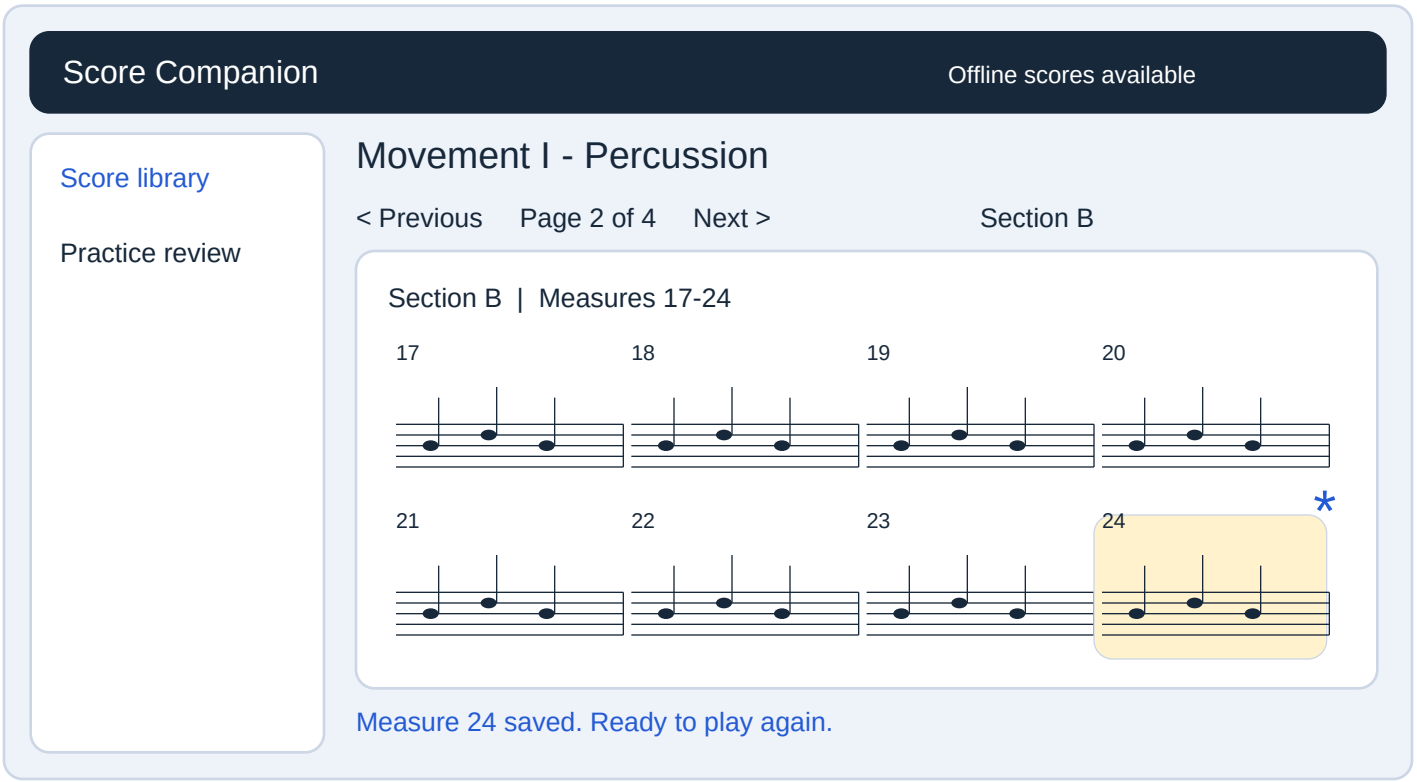
Interview evidence: “MuseScore doesn't have a good zoom functionality to it and the UI gets in the way of the notes. No markup either for finger positions.” - Interview 4

Assumption to test: Navigation is fast enough to avoid interrupting performance.

Next: One-action measure marker

Screen 3: One-action measure marker

C: quick-marker concept and evidence. A: explicit tap target, confirmation, and integrated redraw.



What the user sees: Measure 24 highlighted with a star and a short saved confirmation.

What the user does: Tap measure 24 once when the director calls out the correction; resume playing without typing.

Design decision: Make the measure itself the tap target. One tap stores the marker; confirmation does not block the next entrance.

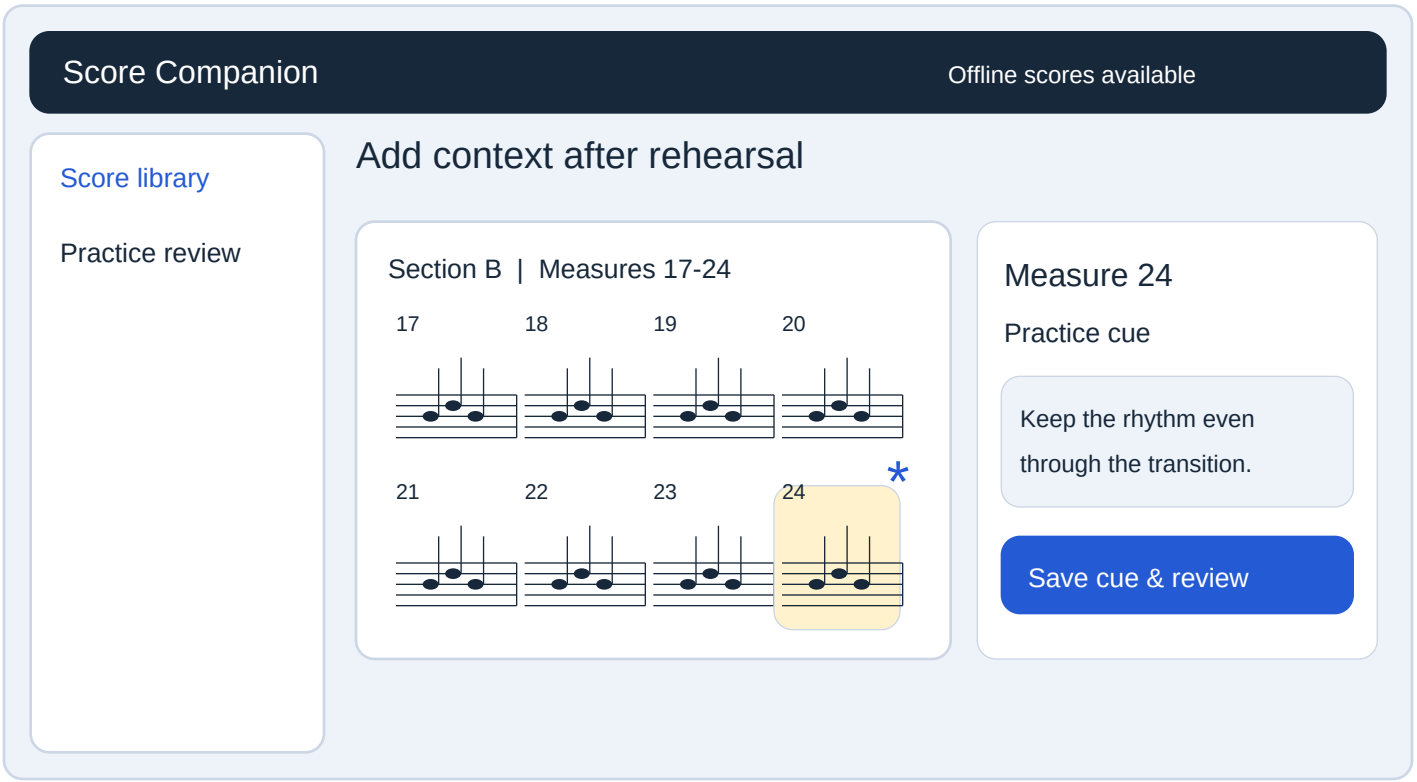
Interview evidence: “Often we don’t have enough time to pick up our pencils, write it down, and get ready to play again.” - Interview 7

Assumption to test: One tap is precise and fast enough to preserve readiness.

Next: Measure-linked practice cue

Screen 4: Measure-linked practice cue

B: annotation concept; C: deferred measure-linked cue. Integrated/redrawn by A.



What the user sees: The marked passage alongside a short cue field.

What the user does: After rehearsal, type a concise reminder and select Save cue & review.

Design decision: Keep Logan's annotation concept but constrain it to a brief measure-linked cue entered after rehearsal.

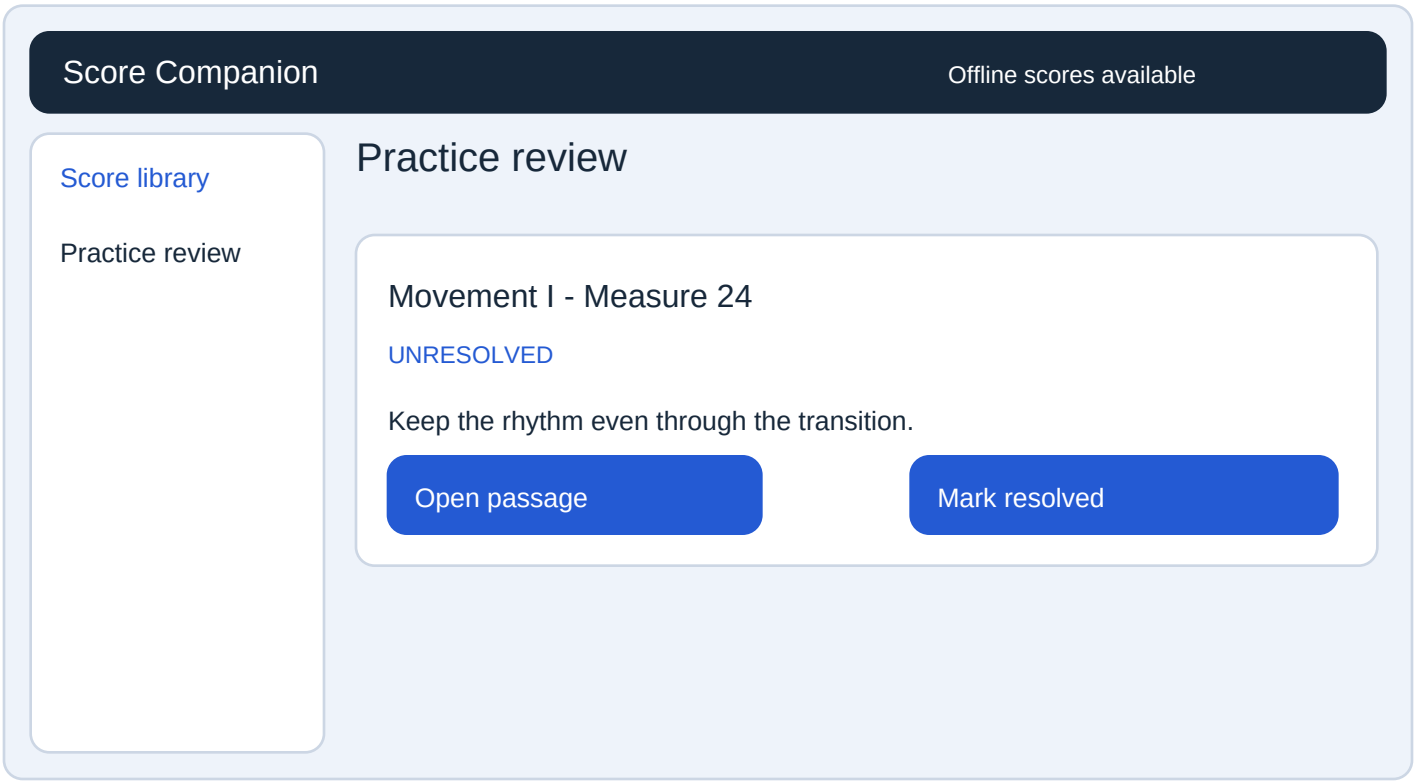
Interview evidence: “I star the measure. And when I look at it later by myself, I’ll see the star and write it in.” - Interview 7

Assumption to test: A short cue preserves enough context for later practice.

Next: Unresolved-passage review

Screen 5: Unresolved-passage review

C: unresolved list, passage access, and resolved action. Integrated/redrawn by A.



What the user sees: A focused list containing measure 24 and its saved correction cue.

What the user does: Select Open passage, practice the correction, then select Mark resolved.

Design decision: Retain Ankit's focused review list and separate practice from the musician's explicit resolved decision.

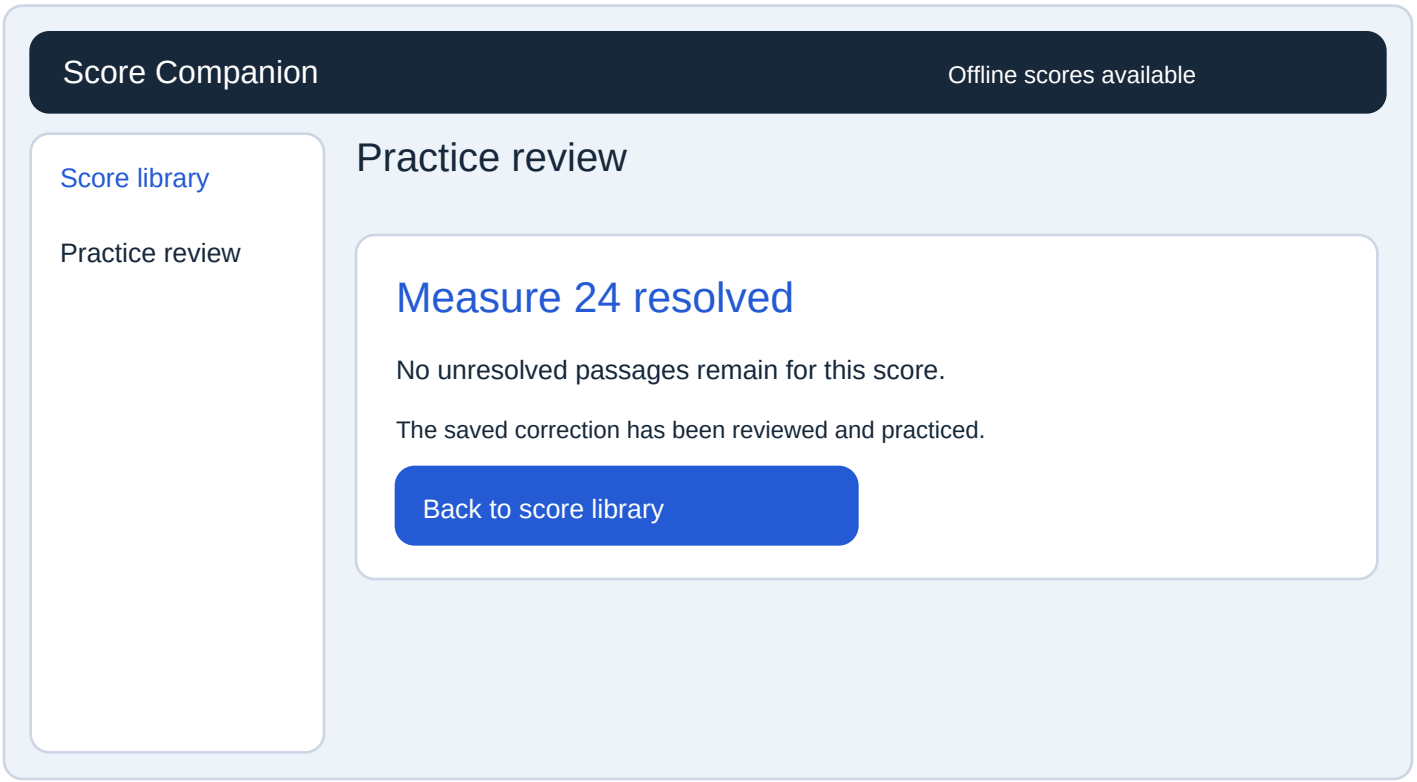
Interview evidence: “Yeah. I remember it, and then I practice it the right way until it becomes muscle memory.” - Interview 1

Assumption to test: Users revisit markers and accurately judge when a correction is resolved.

Next: Correction resolved

Screen 6: Correction resolved

A: new completion screen extending C's resolved action.



What the user sees: A resolved confirmation and an empty unresolved list for this score.

What the user does: Confirm that measure 24 is resolved; return to the score library.

Design decision: Add a visible completion state so the task ends with a clear result rather than only an instruction.

Interview evidence: “I remember it, and then I practice it the right way until it becomes muscle memory.” - Interview 1

Assumption to test: A visible completion state makes the result clear; resolution is self-reported.

Next: Task complete.
