

Contribution by Member D: Jonathan Dempsey

Persona Name: “Reed Anne Doright”

Segment 2: Reactive Score Annotator

Interview Quote:

“I write the measure numbers on important spots and transitions. I also write earmapping signals over long multi-measure rests [...] Often we don’t have enough time to pick up our pencils, write it down, and get ready to play again, because [the director]’s already conducting what he wants us to fix.” (Interview 7)

Goals:

Reed Anne Doright wants to perform his music to the best of his ability, and relies on handwritten annotations for important or difficult sections.

Pains:

It takes time and concentration to annotate that Reed may or may not have at rehearsal. Reed also must be aware of his shortcomings in order to make a proper note, otherwise the annotations will just be clutter.

Behaviors:

Reed will often make a hasty symbol over difficult sections during rehearsal to notate and figure out later.

Scenario 1:

Trigger: The director proceeds with rehearsal before Reed can finish marking in his notes.

Context: The ensemble is practicing a particularly fast section, and Reed has a weird rhythm to make sense of. He made a mistake during rehearsal, the director made a quick verbal mention of the error before promptly beginning at a different section of the song.

Goal: Reed wants to annotate a heuristic that will help him play a weird rhythm with more accuracy.

Current Pain: Reed doesn't have enough time in rehearsal to annotate before the director orders the ensemble to practice elsewhere. He also is not given any workable advice by his director that would be helpful to write down.

User Story 1:

As Reed Anne Dorigt, I want a faster annotation method for music, so that I don't have to choose between falling behind the pace of rehearsal and neglecting to write important information.

User Story 2:

As Reed Anne Dorigt, I want a more comprehensive method to think about music, so that I don't waste time writing useless annotations and can streamline my practice.
